Sprint Review Meeting Results for Sprint 1

What was accomplished in this Sprint and how did it add value?

We were able to create test applications that displayed JSON, location APIs, and UI design. The goal of the sprint was to be a learning sprint so none of the deliverables themselves are useful towards our MVP but are rather used to display the knowledge we gained that we plan to use towards our MVP.

What (if anything) has changed in your environment?

Evan is going to be out for a week during the next sprint and Hitesh will be absent next Thursday and Friday (16th, 17th) which may overall cause some discrepancies in planning that we should account for during our next sprint planning meeting.

What (if any) adjustments did you make to your product backlog based on the results of this Sprint?

We have not made any adjustments as of right now but may make some changes at the start of the next sprint once we begin to analyze our learnings and plan how we want to move forward with the app.
